

CP Series FOUR POINT HIGH SPEED PRESS

DESIGN Features

Slide Lift System

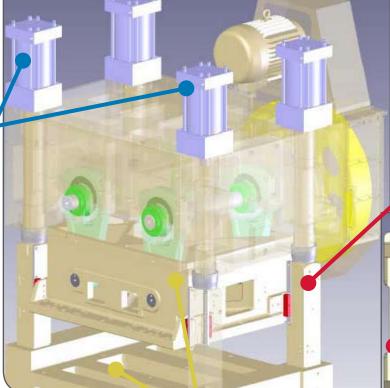

- , HYDRAULIC WITHDRAWAL
- , QUICK CHANGE TOOLING
- STUCK ON BOTTOM RECOVERY
- , OVERLOAD PROTECTION

Stuck on Bottom Recovery

The hydraulic withdrawal system allows you to raise the slide independent of drive shaft position. This feature makes it *impossible* to stick the press on bottom dead center.

Hydraulic Withdrawal

The patented hydraulic withdrawal system will give you up to 11 inches of die separation without affecting the shut height setting. This feature simplifies die inspection and tool maintenance.

Guidance System

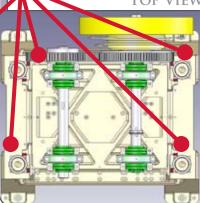

- , 8 POINT SYSTEM
- ANTI-FRICTION ROLLER BEARINGS
- , ZERO CLEARANCE GIBS
- LARGE EFFECTIVE BEARING AREA

The CP Series incorporates a **8 point guidance system** on the slide.

All gibs use anti-friction roller bearings installed with *zero clearance*.

This gives the slide a very high degree of accuracy for higher quality parts and longer tool life.

TOP VIEW

Construction

- , HEAVY DUTY CAST FRAME
- , Flexible Design Features

The cast iron crown, bed, and slide of the Oak CP Series provides *superior vibration and noise dampening* compared to conventional steel frame presses. The process used to make our castings allows us to quickly and easily optimize slide and bed configurations to match the application.

HYDRAULIC WITHDRAWAL SYSTEM
